

# Computer Science: Software Development and Digital Media Production

This course programme is a school/college partnership designed to introduce you to software development and digital media production (includes audio, images and video).

You will study:

- > NPA in Software Development at SCQF Level 4
- > NPA in Digital Media Production at SCQF Level 6

Software Development focuses on planning and developing practical skills in software development through the use of a high level language. This will allow you to be able to solve problems and implement short computer programs.

Digital Media Production offers you the knowledge and understanding of acquiring, editing and producing digital media elements in a fundamental area within digital media.

You will also develop skills in the use of a range of tools to acquire various digital elements from a range of different sources, editing and assembling them into a final product.

## How will I be assessed?

You will be assessed through projects and small assignments.

## Moving on

If still in school, you could consider our Computer Science: Digital Media Animation and Web Design Fundamentals course or our full time NC Computing with Digital Media.

## How and where will I study?

1 day per week in either a school base or a college campus.

## Entry requirements

You can be going in to S4 (subject to school approval), S5 or S6 when you start.

## How to apply

You need to complete an application form which you can get from your school guidance teacher.
